01 ABOUT HYDRAPAK

Your source for high quality products and technical expertise

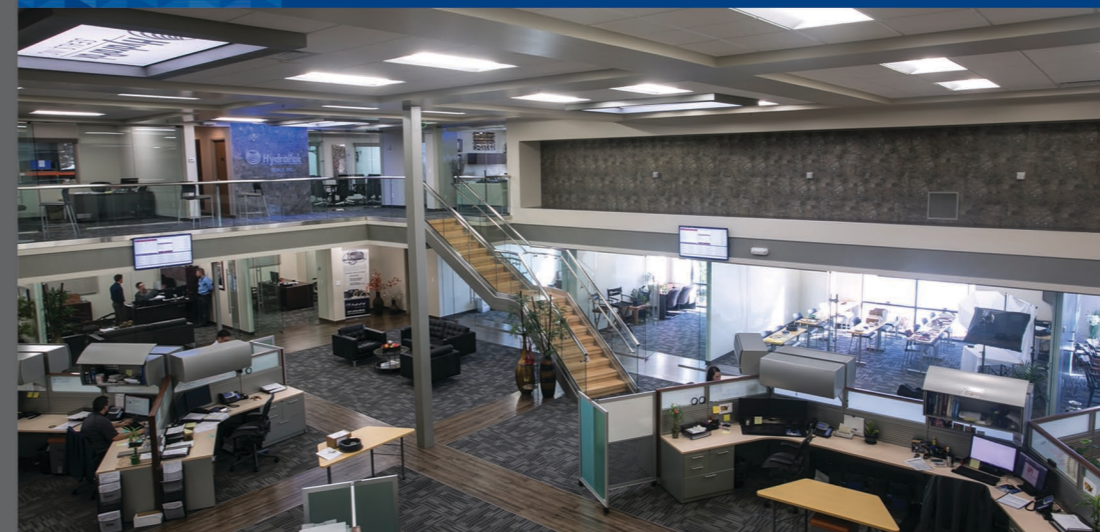

Our sales/engineering team, along with our multi-million-part inventory, truly sets HydraPak apart. We deliver same-day service on standard products, as well as a quick 2-3 day turnaround on most non-stock items. Manufacturing customized seal profiles to meet your needs, our technicians can offer solutions to even the most difficult seal challenges.

Complete customer satisfaction is our goal. Customer service at HydraPak hinges on our professional and consistent staff. Our team is tenured in the industry and can guarantee a reliable, informed contact every time you call. We believe that clients are satisfied when their concerns and needs are met in a professional way. We value your feedback, as well any questions or problems, because it improves our service.

WORLD-CLASS CUSTOMER SERVICE

HydraPak maintains and distributes one of the largest stock of fluid power products in North America, offering all the necessary components for custom hydraulic and pneumatic applications. Established in 1976, HydraPak believes that superior products and unparalleled service are the foundation of effective business. We purchase quality inventory and meet stringent industry standards to provide the best available products. In an evolving market, we adopt best practices to stay on the edge of technology and give you the advantage of competitive pricing in the high-tech, industrial, and medical marketplaces. Online information and ordering is available at our website:

INDUSTRIES SERVED

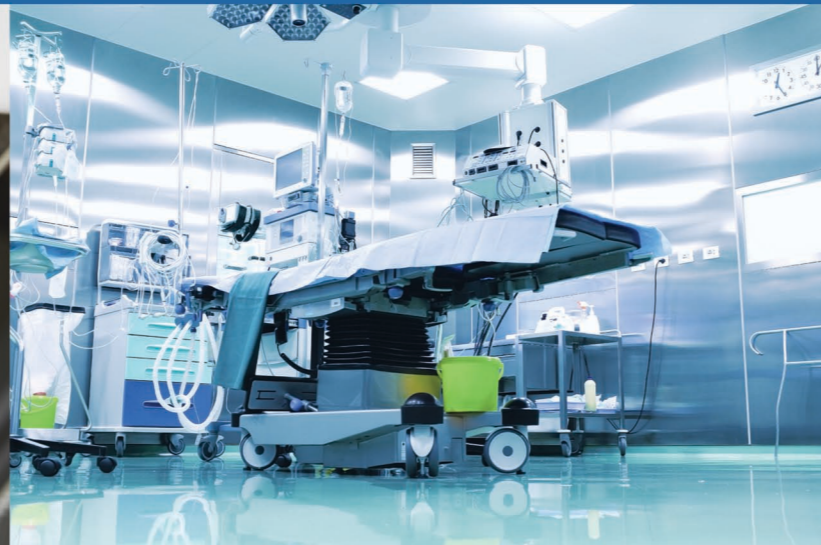

- Aerospace
- Automotive
- Biotechnology
- Chemical Processing
- Food Processing
- High Technology
- Medical
- Metals Processing
- MRO
- OEM
- Pharmaceutical
- Pulp & Paper
- Semiconductor

Dynamic temperature, pressure, friction, and corrosion conditions greatly impact both the efficiency and longevity of sealing systems. This implies that extensive knowledge of these conditions is an essential component of any seal house in satisfying the sealing requirements of customers in each of these industries. HydraPak has internalized this fact and thus continues to prove this expertise in the design and manufacture of seals that optimize performance in all industries.

02 LIFE SCIENCES

▶ The environments of Life Science applications place unique pressure on seal products to maintain, not only function and durability, but also sterility and hygiene. HydraPak offers sealing solutions that excel in testing laboratories, imaging equipment, operating rooms, patient rooms, and in the day-to-day operations of the medical industry. Considering the high stakes of life and death patient health, our sealing expertise is the reliable solution to reduce downtime and increase performance.

HydraPak materials are chosen precisely to suit the harsh biotech and medical environments found in the industry in order to satisfy its critical sanitation requirements. Our silicones and engineered plastics are designed for friction-sensitive applications, while minimizing heat and wear. With a focus on clean product and micro-sized to suit the precision requirements of the industry, our custom machined solutions feature extended sealing life and optimal performance.

03 AEROSPACE

▶ HydraPak provides aerospace customers durable, cost effective solutions for applications such as engines, wheels and brakes, landing gear, and flight controls. The heavy loads, environmental debris, and extreme pressures of flight require materials and machined seals that survive and perform their entire life cycle, requirements which are right down the alley of our expertise. We thus confidently offer a range of standard and customized airframe designs that ensure optimal efficiency during assembly, operation, and maintenance of aircraft and their support systems.

Our extensive portfolio of specialty O-rings, hydraulic, pneumatic, rotary, and fueldraulic seals, high temperature engine gaskets, and aerodynamic components deliver quality to both civil and military aircraft systems. Complementing these products is a full range of sealing materials, featuring reinforced elastomers and PTFE. Custom machined in our plant, these products and materials guarantee our ability to meet your aircraft needs quickly.

04 MRO / OEM

Our custom machining capabilities coupled with our rapid response team, allows HydraPak to easily meet the needs of both maintenance/repair operations and original equipment manufacturers. Providing advanced machining technologies, components and assemblies, we ease the challenge of replacing worn seals and outdated materials. Our unlimited capacity to manufacture custom designs enables us to produce hard-to-find and obsolete parts.

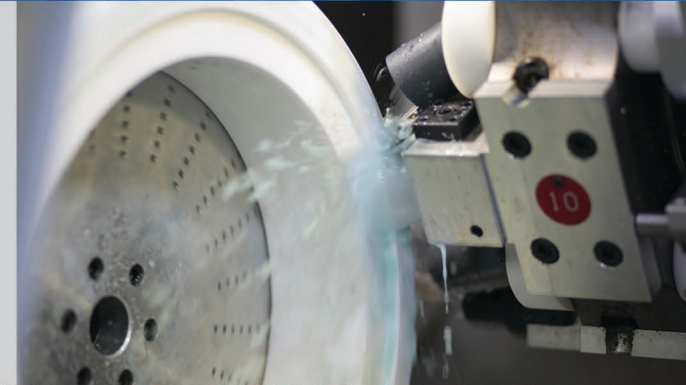

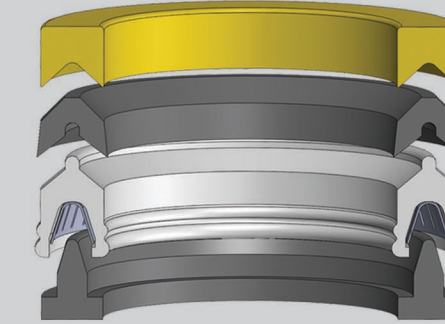

We recognize the sealing challenges involved in machine downtime, and our rapid response team is dedicated to quickly satisfying the needs of MRO/OEM customers. We save customers millions of dollars in lost production with custom sealing solutions and an extensive inventory ready for immediate delivery. With no extra costs for tooling, HydraPak is the one-stop-shop for repairing seals and extending the time between scheduled maintenance.

05 CUSTOM SEAL SOLUTIONS

HydraPak's advanced machining centers use progressive digital and mechanical technology to manufacture your seals, gaskets, and O-rings. This sophisticated machining technology allows production of unlimited custom designs. We employ an extensive range of materials to produce made-to-order engineered sealing systems that meet the challenges of any application. To minimize down time and loss of production, we expedite service in a fast turnaround that does not compromise design or quality.

We operate CNC lathes and mills with the aid of industry leading CAD/CAM software to manufacture custom products quickly, accurately, and efficiently. Live tooling capabilities on our lathes enable various complex milling operations to be cut in one setup. HydraPak also uses water jet cutting technology to manufacture our customized, prototype and volume gaskets. In addition, we vulcanize high quality O-ring seals with large diameter capabilities to service the aerospace, defense, wind power, and fuel industries.
