01 ABOUT HYDRAPAK

Your source for high quality products and technical expertise

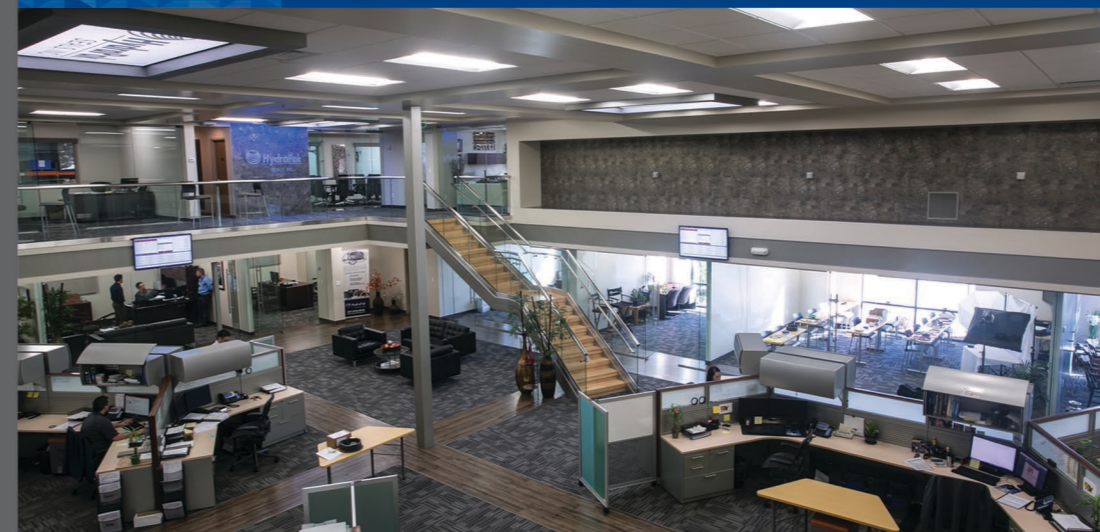

Our sales/engineering team, along with our multi-million-part inventory, truly sets HydraPak apart. We deliver same-day service on standard products, as well as a quick 2-3 day turnaround on most non-stock items. Manufacturing customized seal profiles to meet your needs, our technicians can offer solutions to even the most difficult seal challenges.

Complete customer satisfaction is our goal. Customer service at HydraPak hinges on our professional and consistent staff. Our team is tenured in the industry and can guarantee a reliable, informed contact every time you call. We believe that clients are satisfied when their concerns and needs are met in a professional way. We value your feedback, as well any questions or problems, because it improves our service.

WORLD-CLASS CUSTOMER SERVICE

HydraPak maintains and distributes one of the largest stock of fluid power products in North America, offering all the necessary components for custom hydraulic and pneumatic applications. Established in 1976, HydraPak believes that superior products and unparalleled service are the foundation of effective business. We purchase quality inventory and meet stringent industry standards to provide the best available products. In an evolving market, we adopt best practices to stay on the edge of technology and give you the advantage of competitive pricing in the high-tech, industrial, and medical marketplaces. Online information and ordering is available at our website:

INDUSTRIES SERVED

- Construction
- Fluid Power
- Hydro
- Injection Molding
- Marine
- Mining
- Off-Highway
- Oil & Gas
- Sanitary
- Steel Manufacturing

Dynamic temperature, pressure, friction, and corrosion conditions greatly impact both the efficiency and longevity of sealing systems. This implies that extensive knowledge of these conditions is an essential component of any seal house in satisfying the sealing requirements of customers in each of these industries. HydraPak has internalized this fact and thus continues to prove this expertise in the design and manufacture of seals that optimize performance in all industries.

02 CONSTRUCTION

▶ Construction equipment navigates the long hours and extreme conditions demanded by the building process from excavation to concrete. HydraPak provides superior sealing solutions developed specifically for excavators, bulldozers, loaders, concrete pumps, and cranes. In an industry requiring maximum efficiency and reliability, our services combine the most recent technologies and designs to support safer sealing systems that perform over a long service life.

Our mobile kits and hydraulic seals enable equipment reliability and help ensure job site safety. Combating the corrosive elements of earthwork and concrete, HydraPak sealing solutions ensure top-notch machine performance. When downtime means money lost, our superior materials and designs provide longer operational life and minimize failure. This engineering expertise makes HydraPak the obvious choice to address your construction machinery needs.

03 MINING

▶ Facing severe working environments, the mining industry demands reliable sealing solutions. Chemical corrosion, extreme temperature, abrasive contaminants, heavy loads—these all require that seals, bearings and packings meet the most stringent quality standards and demonstrate the best performance. Suppliers must therefore offer superior sealing solutions and an awareness of the processes involved in mining applications. To address these needs, HydraPak stocks a complete inventory of materials and products for drills, excavators, hoists, conveyors, haulers and loaders, as well as customer specific sealing requirements necessary for superior performance in the field.

04 OIL & GAS

▶ As the oil and gas industry evolves, wells are deeper and refining more aggressive, thus creating increasingly difficult working conditions for seals and bearings. HydraPak's sealing solutions are engineered to address the severe environments in the offshore, upstream, and mid/downstream onshore production. We service a wide range of equipment in the industry, including rigs, shore plants (swivel stack, top drive unit, tensioner systems), compressors, pumps, valves, and blow-out preventers.

HydraPak works to accelerate production time from drilling to market. Our products lengthen maintenance intervals by improving efficiency in existing applications. With safety being a top priority, our materials are particularly engineered for reliability, to resist corrosion, and withstand extreme pressures and temperatures. Supplying solutions from bearings and locking T-seals to protector products, we prioritize your machine applications to minimize downtime and increase yield.

05 STEEL MANUFACTURING / OTHER

▶ Seal systems must function in a wide spectrum of operating conditions and environments, providing reliable performance over a long service life. From concept through development and testing to production, HydraPak's Rapid Response team offers industry specific engineering expertise and experience in addition to expedited service on demand. Whether you're solving a sealing challenge in steel manufacturing, forestry, agriculture or other off-highway applications, HydraPak guarantees the competitive edge you need to excel in your industry.

In the field, seals are confronted with a range of operating conditions from temperature and pressure to chemical corrosion. To combat these challenges, we consider the impact of environmental concerns to select the materials best suited to perform in your industry. Whatever your requirements, HydraPak will supply a variety of rubber materials, high performance plastics and thermoplastic elastomers. Combined with our quick response and outstanding service, these quality materials make HydraPak your one-stop-shop for sealing needs.
